# **TECHNICAL DATA SHEET**

# MM CAT R 5 NT Catalyst

<ul> <li>Description</li> <li>The MM catalysts are specially formulated for use with the MM900 series and MM800 series moulding rubbers. They offer the end user a greater flexibility to meet the requirements of the application and give some unique additional properties to products in the MM900 and MM800 series.</li> <li>MM VEI NT catalysts offer the end user a less hazardous option and improved resistance to inhibition from moulding clays and polyurethane casting resins in comparison to catalysts based on dibutyltin dilaurate.</li> <li>Key Features <ul> <li>Red colour</li> <li>Fast curing speed</li> </ul> </li> <li>Application</li> <li>Catalyst for condensation cure moulding rubbers</li> </ul>	Property Uncured Product 23 +/-2°C and 50 +/-5% hu	Test Method nidity	Value
	Appearance Color Cure Type De-mould Time / Full Cure a 23°C/73°F	at	Liquid Red Condensation <3 hrs
	Mix Ratio By Weight Pot Life mins at 23°C/73°F		20:1 15 - 45 mins
	Storage Max Storage Temperature Shelf Life		40 °C / 104 °F 12 mths

#### Use and Cure Information

The curing process starts as soon as the catalyst is added to the MM900 series or MM800 series rubber base. Under normal conditions of temperature and humidity, typical curing characteristicsare described below. If the product is to be used in contact with aggressive chemicals, such as high styrene polyester resins or epoxies, it is recommended that the rubber be allowed to cure for 48 hours before use. **How to Use** 

Charge 95-100 parts by weight of MM900 series or MM800 series and the relevant parts by weight of catalyst into a suitable plastic or metal container. The volume of the mixing vessel should be sufficient to allow for rapid expansion, which takes place during the initial degassing of the catalysed rubber. Mix thoroughly avoiding excessive air entrapment but using the colour contrast to achieve homogeneity (where applicable) Stop

the mixer and scrape the vessel walls a few times. To prevent imperfections due to bubbles in the cured rubber, it is advisable to de-aerate the liquid rubber by using intermittent evacuation for a few minutes. Normally after releasing the vacuum 2 or 3 times, the mass collapses naturally after which degassing should continue for only a few minutes.

It is absolutely important to check the compatibility in preliminary tests if unknown substrates are used.

### **General Properties**

MM Catalyst	Characteristic	
CAT B5 NT	Blue, standard cure, less hazardous	
CAT R5 NT	Red, fast cure, less hazardous.	
CAT L6W NT	Colourless, standard cure, less hazardous	
Cat W	Booster to accelerate cure	
CAT L5 NT	Colourless, long pot life, leather application	
CAT VE NT	Various colours, standard cure, shoe sole moulds	
CAT VEI NT	Green, fast cure, shoe sole moulds.

Typical Curing Properties (At 23 +/- 2°C and 45 to 55% relative humidity)				
MM Catalyst	Addition Level	Pot Life (min.)	Demould Time (h)	
B5 NT	5	>45	<24	
R5 NT	5	15 bis 45	<3	
L6WNT	5	>45	<24	
CAT W*	1	15 bis 30	1 bis 2	
CAT L5 NT	5	>60	<24	
CAT VE NT	5	>20	<3	
CAT VEI NT	5	5 bis 20	<1,5	

\* must be used in addition to standard cure speed MM catalyst.

## Health & Safety Safety

Please observe our safety data sheets and the safety remarks on our container labels when handling our products. The dangerous goods regulations and the accident prevention regulations of the professional associations must be particularly observed. Keep the safety data sheet of the applied product at hand since it provides you with useful instructions for the safe use and disposal of the product as well as for actions to be taken in case of accidents.
