TECHNICAL DATA SHEET

QM 100 2 part moldmaking material

Description QM 100 is a two-component, room temperature, condensation	Property Uncured Product	Test Method	Value
cure, silicone material. The cured rubber is a crystal-clear material designed specifically for the special effects market. The	Cure Profile		3 days, 25°C, 50% humidity
materials' clarity allows for its' use as fake ice, fake glass or any application where clarity is required.	Cure Type		Condensation
Key Features	De-mould Time / Full Cure at 23°C/73°F		4 - 6 hrs
 Low viscosity Clarity 	Density A	BS ISO 2781	0.97
Fast de-mold time	Density B	BS ISO 2781	0.92
Clear, pigmentable	Mix Ratio By Weight		10:1
Key Applications	Rheology		Liquid
 Complies with FDA indirect food contact regulation CFR 177.2600, when used with QM Cat Clear FG. Refer to QM Cat Clear FO. data short for thrigh properties. 	Snap Time to Become a Semi Solid at 25°C/77°F		>35 min
Clear FG data sheet for typical properties.	Viscosity Mixed	Brookfield	550 cP
Application	Cured Product		
Special effects, fake glass, fake ice pigmentable Use and Cure Information	Color		Clear
		DC ICO 0701	
CURE CHARACTERISTICS	Density	BS ISO 2781	0.96 g/cm3
QM 100 should be catalyzed with QM Cat 100 at a ratio of 10:1 by weight. Faster cure can be obtained using DBT or a higher level	Hardness Shore A	ASTM D 2240- 95	30
of QM Cat 100. However, rapid cure of condensation cure moldmaking rubber often results in a small sacrifice of physical	Linear Shrinkage (%)		<0.3 %
properties or an increase in hardness. The curing process begins as soon as the catalyst is mixed with the base. The material will cure as described in the data above under normal temperature (25 °C) and humidity conditions (50% RH). Because this system is sensitive to heat and humidity, a change in cure speed may be	Storage Max Storage Temperature Shelf Life		38 °C / 100 °F 12 mths

observed if one or both of these variables are altered. A large difference in temperature $(+/-5 \,^{\circ}C)$ or humidity (> 60% - 70%) may alter the cure profile of the material. In addition, if the product is to be used with aggressive resins such as high styrene polyester resins, it is recommended that the rubber be allowed to cure for 48 hours.

TYPICAL PROPERTIES

UNCATALYZED				
TEST	QM 100	QM Cat 100		
Appearance	Clear	Clear		
Viscosity	600 cps	20 cps		
Specific Gravity	0.97	0.92		

С	ATALYZED		
MIX RATIO 10:1 by weight			
PROPERTY	RESULT		
Catalyzed Color	Clear		
Snap Time at 25 °C *	> 35 minutes		
Demold Time	4 – 6 hours		

* Snap time is defined as the time required for the material to become a solid or semi-solid.

CURED PROPERTIES 3 DAYS at 25 °C				
Durometer, Shore A	30			
Linear Shrinkage	< 0.3%			

MIXING

QM 100 should be thoroughly mixed with QM Cat 100. Material should be mixed in a clean, compatible metal or plastic container. The volume of the container should be 3 - 4 times the volume of the material to be mixed. This allows for expansion of the siloxane material during de-

aeration. Mix thoroughly by hand or with mixing equipment while minimizing air entrapment until a homogeneous mixture is obtained. The material will take on a uniform clear appearance.

DE-AERATION

Air trapped during mixing should be removed by vacuum at 29 inches of mercury. During the process, the material will expand, and intermittent evacuation may be required. Typically, after releasing the vacuum 2-3 times, the mass will collapse on itself at which time the vacuum should be left on for an additional 2-4 minute.

Storage

See product label and /or CoA for a specific "Use By Date". Product should be stored in its original, unopened container. Storage beyond the date specified on the label does not necessarily mean that the product is no longer usable. In this case, the properties required for the intended use should be checked for quality assurance reasons.
